

LEATHER N°0 RADERBELT®

Leather N° 0 is a natural full grain leather gross with mineral tanning followed by light oil food. It was originally conceived as a leather for belts, which is used in our RADERBELT® workshop. This very dry leather, from beef and bull, provides strong friction coefficient on the edge of the leather. The selection of the crop associated with a tanning concentrating a tightening of the fibers offer mechanical properties superior to the conventional leathers. This leather can also be stretched on customer request to improve its properties. Friction, traction and resistance to wear are its key words.

Thickness: 4-4.5 mm
Dyeing: Non-tinted
Coating: Natural

AVAILABLE COLOR

SKIN AREA

CROP

USE EXAMPLE

- Friction belt
- Friction leather

ON REQUEST

- Shaving to refine the thickness of the leathers
- Customized coating and color
- Stretching on request possible
