

LEATHER N°9 RADERBELT®

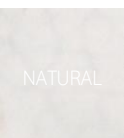

Leather N ° 9 is a full grain leather, from beef and bull, mineral tanned and oil fed. It is conceived and worked to resist any environment and can be easily molded. It offers a good balance of cutting, strength and durability. It finds its place for any use of protection against the external projections, the abrasion, the friction or even the shocks. It is a low-fed leather that also offers good adhesion associated with a fastness to rubbing for industrial uses.

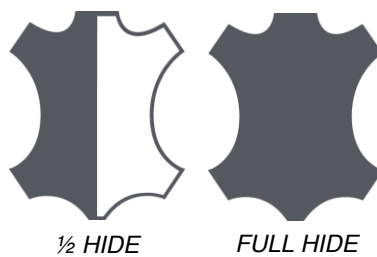

Thickness: 3-3.5 mm
Dyeing: Non-tinted
Coating: Natural
