

FRICION BELT RADERBELT®

Our friction belts are custom made. With the leathers N°0 and N°30, full grain leathers, they generate very few particles unlike friction belts made from split leather. They offer high tensile strength, inextensibility, and high coefficient of friction. The bull hides are sorted by thickness to fit perfectly over the entire length of the bandage. Our friction belt combine mineral tanned leather for friction, vegetable leather for bending the belt and nylon to prevent the belt from elongation.

SPECIFICATIONS

D = Outer diameter of fly-wheel
P = Groove depth

H = Groove height
I = Friction belt width
